

press release

NNZ have carried out research into the quality of salad packaging

NNZ, the packaging network, is a family business that has been active in the field of agricultural and industrial packaging for more than 85 years. One of the strengths of the business is its cooperation with partners in many areas, the ultimate aim being to offer optimum solutions to packaging problems for the benefit of existing and potential customers. NNZ forms the binding link in a network of buyers, suppliers, distributors, universities, research institutes and governments. The business operates as a trade partner and as a knowledge and development centre in the field of packaging.

Recently, NNZ have carried out research into the quality of salad packaging. In this research baby leaf salad was packed in various conventional and biodegradable films. Once packed, the quality of the salad was tested over a 6 day period. During this time the salad was tested for, amongst other things, weight-loss, carbon dioxide and oxygen concentrations, and visual appearance. The research showed that one specific type of biodegradable and one specific type of conventional film were most suitable for packing baby leaf salad. Both films are supplied by NNZ.
