

Paper

NNZ develops and supplies a wide range of high-quality paper sacks. Buyers include, among others, the foodstuffs, pet food, cattle feed, seed improvement and chemical industries. Together with suppliers and buyers, NNZ continuously keeps a critical eye on the composition of paper sacks.

Thanks to intensive product research, NNZ has succeeded in developing sacks which are composed of fewer walls, while the strength remains warranted. This development reduces the use of active ingredients, with considerable advantages for both the environment as well as the buyer.

NNZ is a leading organisation in the world of innovative packaging for the agricultural and the industrial sector. The company undertakes intensive market and product research and continually anticipates market developments. In doing so, NNZ has earned a central position at international level within the world of packaging.

Basic specifications

The requirements for paper sacks differ for each industry and are highly dependent on both the product to be packaged as well as the filling equipment used. NNZ therefore offers a wide selection of paper types:

- Grease-proof
- Sackkraft, possibly with LDPE or HDPE coating
- Clupack
- Wet strength
- High porosity

Most of these paper types are available in various gram weights.

NNZ supplies paper sacks in various designs for a content of 1 to 50 kg:

- Open-mouth :
 - cross bottom
 - block bottom
 - sewn bottom
- Valve (various models available)
- Pinch bottom
- Cutbottom
