

Ökopack®-Film

For all those who care about nature and our environment NNZ offers a sustainable line of packaging products under the name Ökopack. Ökopack-Film is made of 'annually renewable materials' such as starch from potatoes, maize and corn. These raw materials – originating, as they do, from plants that can be grown and harvested at least annually - are highly sustainable and practically inexhaustible.

Therefore they offer a real ecologically justifiable alternative to fossil based raw materials. During their growth, plants withdraw CO₂ from the atmosphere. Thus, Ökopack packaging materials help to reduce the greenhouse effect. After use, the materials may be composted in accordance with the CEN 13432 norm. Ökopack-Film can be handled and printed on the same machines and just as easily as conventional film.

Ökopack®-Film

Ökopack®-Film C

Properties Like oriented polypropylene. Shiny, transparent, excellent dead fold, crackly, breathable. High working speed.

Type On rolls, for use on flow packers, horizontal or vertical form, fill and seal machines. Micro or macro perforated (also possible during the packing process).

Ökopack®-Film S

Properties Like polyethylene. Semi-transparent, strong, can be sealed well, moisture absorbent, breathable.

Type Film on rolls, for use on vertical form, fill and seal machines. Bags on rolls, half-tube and sheets. Micro or macro perforated.

The following applies to both films:

Material Made from biodegradable raw material based on starch, CEN 13432 certified.

Printing Printed in up to 8 colours.

Supplied Roll diameter, film width and length as required.

NNZ is a leading organisation in the world of innovative packaging for the agricultural sector. The company undertakes intensive market and product research and continually anticipates market developments. In doing so, NNZ has earned a central position at international level within the world of packaging.
